

Get Linux Script

Docker provides a convenience script at <https://get.docker.com/> to install Docker into development environments non-interactively.

Get the Script

The convenience script isn't recommended for production environments, but it's useful for creating a provisioning script tailored to your needs. Also refer to the [install using the repository](#) steps to learn about installation steps to install using the package repository. The source code for the script is open source, and can be found in the `docker-install` [repository on GitHub](#).

```
curl -fsSL https://get.docker.com -o get-docker.sh
```

Run Script

You can run the script with the `DRY_RUN=1` option to learn what steps the script will run when invoked:

```
DRY_RUN=1 sudo sh get-docker.sh
```
